

DeerBusters has been innovating  
and leading the wildlife fencing  
industry for over 30 years.

Thanks to our knowledgeable customer  
service team and fast coast-to-coast  
shipping options, our customers receive  
high quality, easy to install deer fencing  
at affordable prices.

"I am very impressed at how well this fence material works. The great customer support helped me to easily overcome every fencing issue I faced with my property. The material has worked as expected and is very forgiving to a first time installer. If you are considering deer fencing I highly recommend them."

-- Bruce J.

*"Deer are a huge problem in our area. The poly fence we purchased from Deerbusters.com allows us to have a great garden without worrying about it being destroyed by the deer and all the other critters that frequent our yard. We recommend this fencing to everyone we know with a garden."*

-- Stephen A.

*"We purchased the reinforced deer fencing to close up our property from the deer in our community. It worked as promised and the ticks have disappeared after 2-3 weeks as well. Worth every dollar spent."*

-- Russell S.

**WILDLIFE FENCE**  
& ACCESSORIES

## Poly Fence

Heights : 4' - 8'

## Trident Extruded Fence

Trident's poly deer fence is available in three strength grades: Economy, Heavy Duty and Extra Strength. All three grades feature UV stabilization and breaking strengths up to 750 lbs. to provide up to 20 years of reliable deer protection. The Economy grade is best used as a temporary or seasonal fence, while the HD and Extra Strength grades provide year-round support.

This fence is designed with a 'reinforced bottom', which allows easier ground staking and provides another layer of protection for the bottom of the fence line.

## Tenax Poly Fence

Tenax fence was one of the first deer deterrent fencing materials on the market. This round strand fencing is available in Heavy Duty, Extra Strength and Maximum Strength. This fencing is UV stabilized to last for up to 20 years and has a breaking strength ranging from 650 to 950 lbs.

This fencing can easily be installed in as little as a weekend, providing fast and effective protection from deer for your gardens or landscapes.

## Poly Fence

Heights : 4' - 8'

## Metal Fence

Heights : 2' - 8'

## Trident Steel Hex Fence

Best known for its virtual invisibility, Steel Hex Fence is a reliable solution for deer and rodent management. This 20 gauge metal wire, (18 after PVC coating), is incredibly effective against deer, rabbits, groundhogs and various other critters.

The hexagonal shape, one of the strongest shapes available, provides a durable, reliable and aesthetically pleasing fence that will be virtually invisible at 20'.

## Trident Welded Wire Fence

Welded Wire Fence provides long lasting and durable protection against deer and small animal invasion. Designed for maximum toughness and a modern style, this 14 gauge galvanized wire, (12 gauge after PVC coating), creates a chew-proof barrier that even the most determined garden critters can't gnaw through. This fence is perfect for the homeowner looking for sophistication and strength.

Welded Wire also meets pool code requirements for a variety of municipalities (check your local regulations).

## Metal Fence

Heights : 2' - 8'

## Tenax Elk Fence

Tenax Elk Fence is one of the best fence solutions for elk management. It is also suitable for areas with intense deer pressure from herds of deer. The UV-resistant elk fence has one of the highest break strengths amongst poly fence.

This fence will not rust over time like other fencing options for the heaviest deer pressure.

**Poly Fence**

**Heights : 6' - 8'**

**Heights Available: 6' & 8'**

## Metal Fence

**Heights : 6' - 8'**

**Heights Available: 6' & 8'**

## Trident Fixed Knot Fence

Fixed Knot is one of the strongest metal fences available. Popular amongst deer farmers, ranchers and homeowners with large amounts of property to enclose. Fixed Knot fence is trusted for all animal applications and continues to be one of the best selling fences on the market.

This 12.5 gauge fence has a graduated wire spacing design that narrows as the fence nears the ground for small animal deterrence.

	Overall Break Strength	Ease of Installation	Longevity of Material	Near Invisibility at 20'+	Types of Animals
<b>Poly Fence</b> Trident & Tenax					Deer Pets
<b>Steel Hex</b>					Deer Pets Rodents
<b>Welded Wire</b>					Deer Pets
<b>Elk Fence</b>					Deer Elk
<b>Fixed Knot</b>					Deer Elk Livestock

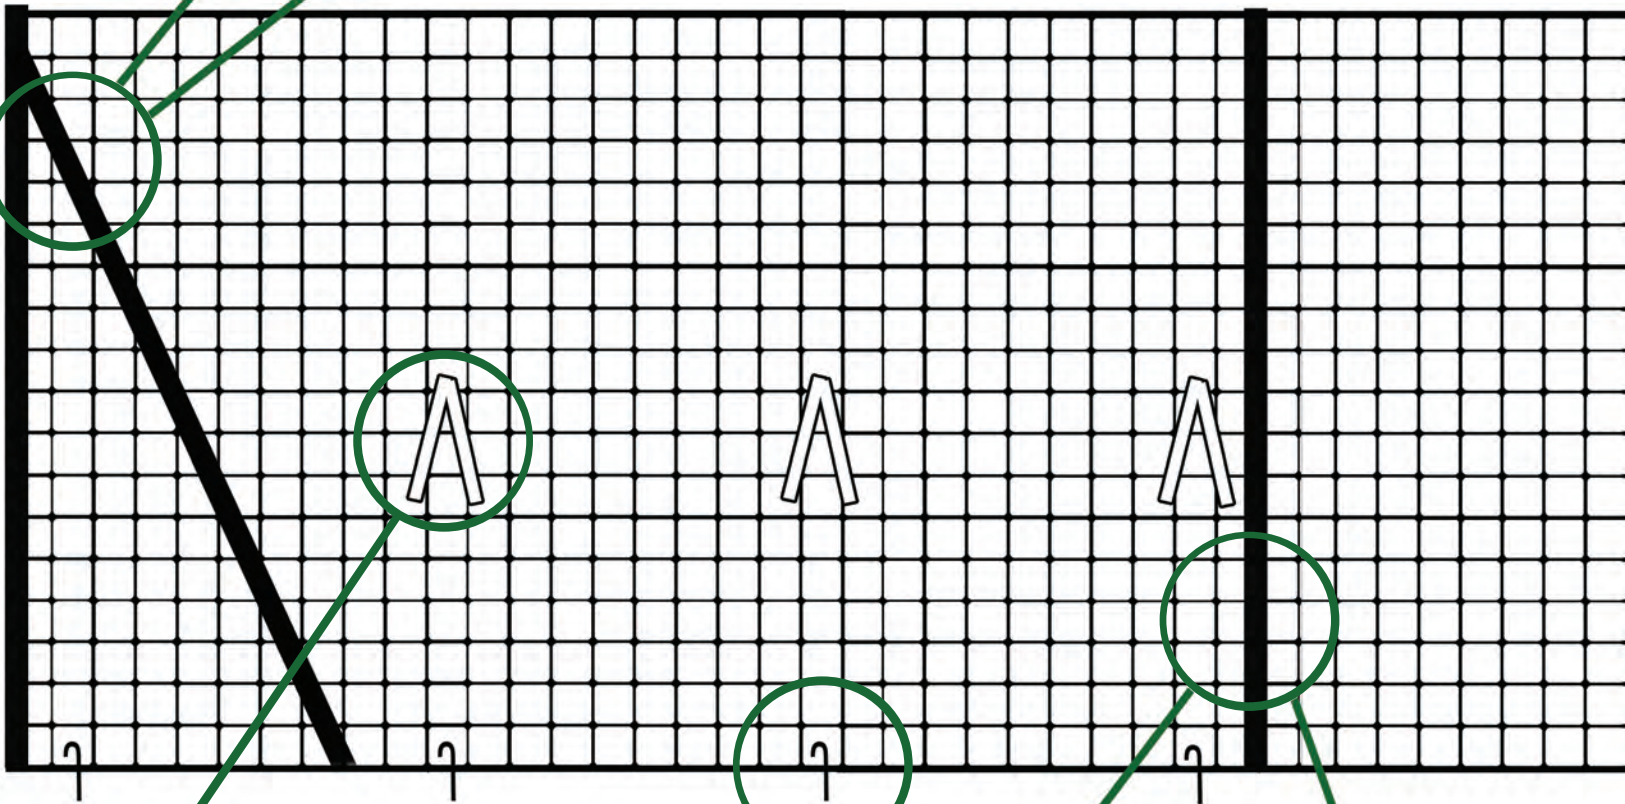

End posts are single braced, 2½" posts that add stability and strength to the fence.

Use when your fence would stop at a structure or another fence.

# ANATOMY

Warning banners help deer visualize the fence, by providing a contrasting color.

Ground Stakes help keep deer from pushing underneath the fence.

Heavy Duty Line Posts use a ground sleeve for easy installation.

These 1½" posts should be placed 15' apart along the fence line.

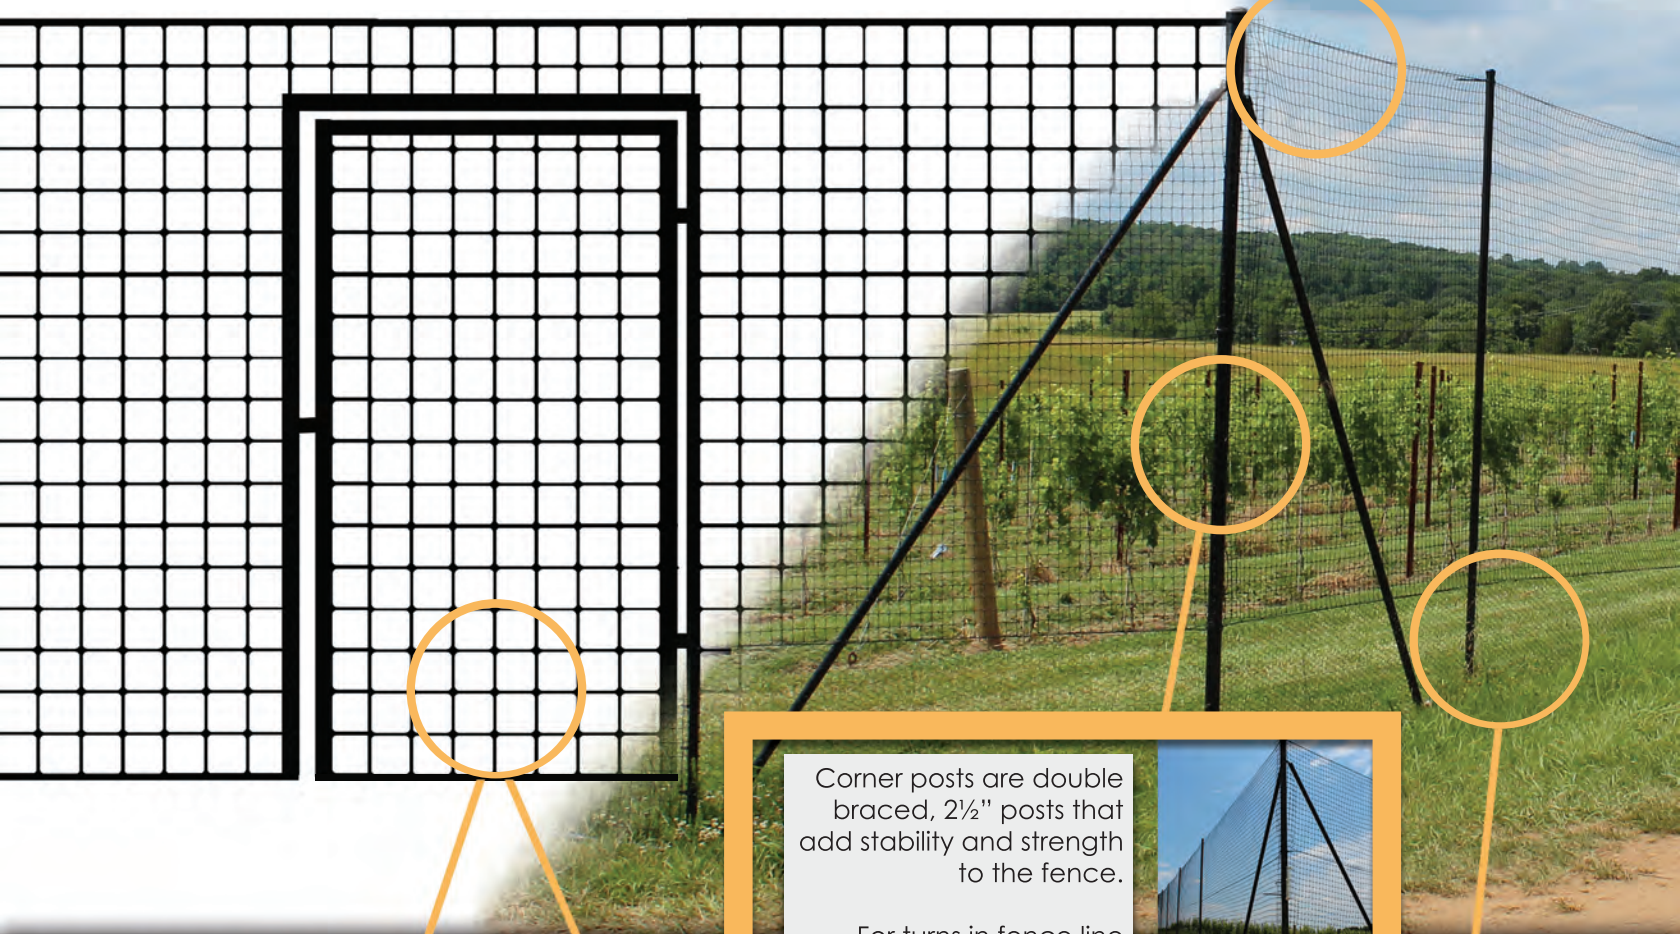

# OF A DEER FENCE

Tension wire adds an extra layer of stability.

Top wires provide tension and a bottom wire keeps deer from pushing under the fence.

Corner posts are double braced, 2½" posts that add stability and strength to the fence.

For turns in fence line greater than 45°.

Gates allow access for people and equipment through the fence line.

Single and dual door options available.

Steel hex fence can be used as a rodent barrier at the bottom of fences.

This prevents chewing and digging animals from gaining access.

## Poly Fence

Heights : 2' - 4'

## Trident Fence Extension Kits

Fence extension kits are used when an existing fence system is not tall enough to deter wildlife from entering the property. These DIY fence extenders are easy to install and attach to an existing fence. Extension kits include everything needed to give peace of mind against intrusion by wildlife.

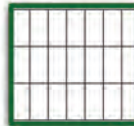

Available for Split Rail, Chain Link, Wrought Iron and all types of Wooden Fences.

## Trident Garden Enclosures

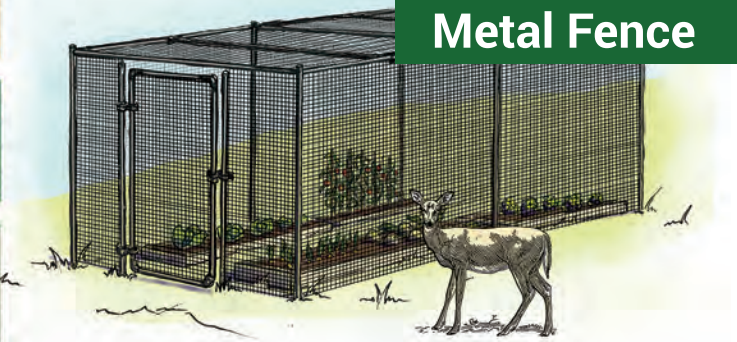

Garden enclosures are the perfect defense against constant wildlife pressure. The top deters birds and climbing critters, while the rest of the enclosure protects your plants from hungry, wandering animals.

The enclosure kits contain everything necessary to install an aesthetically pleasing, top of the line protective enclosure for your most valuable plants.

Garden Enclosures are available in Poly, Steel Hex and Welded Wire materials.

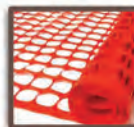

## Poly Fence Metal Fence

## Trident Fence Alternatives

Tree guards offer protection to trunks and tall plants from wildlife damage, especially during the 'rut' season. Deer rub their antlers on the trees, causing damage to the bark.

Bird Netting is a loose poly mesh material that is both a lightweight and affordable barrier to minimize bird damage to plants and landscape.

## Snow/Safety Fence

Farmers and ranchers use snow fencing to create drifts in basins for a ready supply of water in the springtime. For home growers, snow barrier fences add crop protection and push snow away from fields allowing for soil moisture to stay active for the next growing season.

Snow fencing has also been proven to save lives and reduce the risk of motor vehicle accidents; and did you know that plowing snow drifts costs 100 times more than the cost of a snow fence?

**Lyme's Disease is the most commonly reported tick-borne disease in the United States.\***

## Tick Prevention

Deer are the most common carriers of tick-borne illnesses in the United States, spreading debilitating tick diseases to herd members as well as livestock animals, pets and humans. Ticks can be found in grasslands, wetlands and woodlands during the warmer months beginning in March. They stay alive by burying themselves underneath the skin of a warm-blooded mammal, which elevates the risk of tick-borne illnesses.

Although ticks are most active in the spring and summer months, they do not die when the temperature goes below freezing. Instead, ticks become dormant and seek warmth by feeding on mammals, hiding below logs or underneath leaves.

Lyme Disease, the most common tick-borne illness, is a very dangerous disease that can turn life threatening from a single tick bite. In 2015 alone, the CDC reported 37,000 Lyme Disease cases from 14 states in the upper Midwest and Northeast region. Although these states carry the most reported Lyme Disease cases in North America, it is possible for persons living in other states to pick-up a tick-borne illness from an infected animal.

### The Safest Method For Tick Removal Is To Use A Tick Removal Tool Or Tweezers.

**DON'T** twist, jerk, tug or crush the tick

**DON'T** use your fingernail to try to remove the tick

**DON'T** use lit matches, nail polish, or other folk remedies

**DO** Grasp the tick as close as possible to the head

**DO** Pull firmly to remove the whole tick

**DO** Consult your doctor or veterinarian for next steps

**DO** Wear insect repellent while hiking

**DO** Use flea and tick medicine for your pets

**DO** Always check for ticks after visiting areas where ticks may be located
