

**Poly Extension Kit For Existing Fence (Wood/PVC/Metal)
For: SKU # DC1101, DC1102 (DC1100 instructions are separate*)**

STEP 1: Attach the extension posts to the existing fence posts using the supplied hardware. Hardware will vary depending on the type of post onto which the extension will be secured. The location of the plate on the post will vary depending on the final height of the extension.

3' Extension: Top of plate 2" below post top

2' Extension: Top of plate 14" below post top

STEP 2: Insert the vinyl post cap into the open bottom of the extension post.

STEP 3: Starting with the first post on one side of the fence, attach the fencing to the extension every 12" using the supplied zip ties. Be sure to attach the fencing to the top of the extension by securing a tie through the hole located on the top.

STEP 4: Continue the attachment process from STEP 3 for the remaining extension posts.

Optional Gate Instructions:

When spanning a gate, it is recommended you have extension posts on both outside gate frame posts and on the farthest outside point on the gate door. Stop the fencing on one of the gate frame posts and restart it on the gate frame post opposite. Use a small piece of the mesh material attached to the gate door extensions to complete the gate installation.
